C100 –
the easy-to use 1/8 DIN controller with extensive capabilities

C100

The C100 Universal Process controller is a highly versatile, **single loop controller** designed to be exceptionally easy to operate and set up.

Universal input and **integral transmitter power supply** ensure that the C100 has the capabilities to measure a wide range of process signals such as temperature, pressure, flow and level.

Analog, logic and relay control outputs are all fitted as standard, with the option to add further i/o capabilities such as additional relays, remote set point and digital input, to suit your application.

The **configuration** of the C100 is simply achieved by moving the security switch and entering a simple code from the front panel keys. No passwords, no input links, no complications.

With **hoseproof front panel protection** and superior RF immunity as standard the C100 has been designed to control reliably in the harshest of today's industrial environments.

PID Control

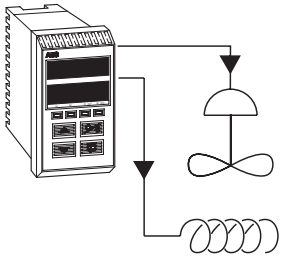
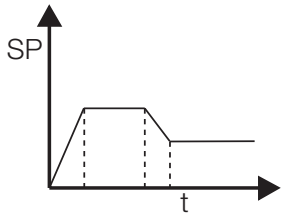
Simple PID control is available using any of the unit's three built-in outputs.

- 4 to 20mA analog
- Logic 18V time proportioning (to drive solid state relays)
- 5A relay for Time proportioning or On/Off control



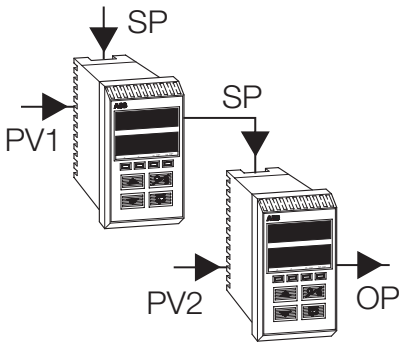
Heat/Cool

Heat/Cool control strategies may be implemented on the standard C100, using a combination of the analog, logic and relay outputs.



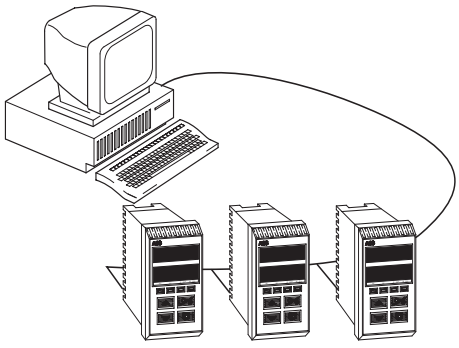
Ramp/Soak Set Point Profiles

The ramp/soak facility available on every C100 provides for a single program, four-segment profile. This facility also includes guaranteed ramp/soak, repeat program, skip and reset.



Master/Slave and Cascade

Two or more C100s can be used in master/slave, or cascade, configuration with the addition of the remote set point option to the basic unit.



RS485/Modbus

Fitted with an optional RS485 serial communication board, the C100 can communicate with PLCs and SCADA systems using
